

A Discrete Alternative to Orthodontics with Invisalign Clear Braces

You may already know that **Grand Dental** offers comprehensive general, cosmetic, and implant dental care for patients in the **greater OKC area**, but did you also know we offer a discrete option for braces for older teens and adults? It is called Invisalign. No one will even know you are wearing it!

Invisalign clear braces straighten teeth without metal brackets and wires. Instead, a series of clear, custom made aligners does all the work, gradually bringing your teeth into alignment over 10 to 18 months. And while traditional braces can make it hard to eat certain foods and to care for your smile, **Invisalign's** clear aligners are removable. That's means you don't have to give up your favorite foods—you can simply take your aligners out when it's time to eat, and, afterward, when it's time to brush and floss.

The Straighter, More Confident Smile You've Dreamed Of

Getting started with **Invisalign** is simple.

Once you and **Dr. Kirk, Dr. Henry, or Dr. Proud** have determined that **Invisalign** is the best option for you, we'll begin putting your treatment plan together with the help of 3D computer imaging and physical impressions of your teeth. Based on both of these, **Invisalign** will create the aligners you'll wear over the next few months.

When you finally have your aligners, you'll just need to wear each set for about two weeks, for 22 hours a day. But because **Invisalign's** aligners can be removed, you don't have to give up your favorite foods, and you can even remove them for special events, whether for a business meeting, an outing with friends, or even a celebration with family.

This is a level of convenience you just can't have with traditional bracket-and-wire braces.

Schedule Your FREE First Visit™
